CORTEZO, MARKY G. **APRIL 17, 2026**

BSIT 2-1 **COMP 009 – Object Oriented Programming**

Midterm Activity #5: Personal Expense Tracker

Instructions

1. Create a Java program named **ExpenseTrackerLastName**.
2. Implement the following methods:
   - A **void method** that displays the program title.
   - A **non-void method** that calculates the total expenses using three values:
     - food
     - transportation
     - other expenses
   - A **non-void method** that checks if the total expense exceeds a budget and returns a message.
   - A **void method** that displays the total expense and the budget status.
3. In the main method:
   - Call all the methods you created.
   - Display the final output clearly.
4. Use **appropriate method names, parameters, and return types**.
5. Add **at least TWO enhancement**:
   - Accept user input
   - Add another expense category
   - Compute remaining budget
   - Display a personalized message
6. Ensure your program:
   - Compiles without errors
   - Produces correct output

SOURCE CODE:

```
import java.util.Scanner;

public class ExpenseTrackerCortezo {

    // this is the void method that displays the program title
    public static void showTitle() {
        System.out.println("   Personal Expense Tracker  ");
    }

    // this is the non-void method that calculates the total of all expenses
    public static double computeTotal(double food, double transportation, double
other, double savings) {
        double total = food + transportation + other + savings;
        return total;
    }

    // this is the non-void method that checks if total exceeds the budget
    public static String checkBudget(double total, double budget) {
        if (total > budget) {
            return "Over Budget!";
        } else {
            return "Within Budget!";
        }
    }

    // this is the void method that displays the total expense and budget status
    public static void showResult(String name, double food, double transportation,
double other, double savings, double total, double budget) {
        System.out.println("\n--- Expense Summary for " + name + " ---");
        System.out.println("Food:             Php" + food);
        System.out.println("Transportation:   Php" + transportation);
        System.out.println("Other:            Php" + other);
        System.out.println("Savings:          Php" + savings);
        System.out.printf("Total Expenses:   Php%.2f%n", total);
        System.out.printf("Budget:           Php%.2f%n", budget);

        // compute remaining budget
        double remaining = budget - total;
        System.out.printf("Remaining Budget: Php%.2f%n", remaining);

        // budget status
        String status = checkBudget(total, budget);
        System.out.println("Budget Status:    " + status);

        // personalized message
        if (total > budget) {
            System.out.println("\nIt seems you went all over your budget. Try to
spend less next time, " + name + "!");
        } else {
            System.out.println("\nWow! It seems that you can manage your expenses
really well! Keep it up, " + name + "!");
        }
```

```
        // thank you message
        System.out.println("\nThank you for using the Personal Expense Tracker, " +
name + "!");
    }

    public static void main(String[] args) {

        Scanner scanner = new Scanner(System.in);

        // call the title method
        showTitle();

        // ask for the user's name
        System.out.print("\nEnter your name: ");
        String name = scanner.nextLine();

        // ask for the budget
        System.out.print("Enter your budget: Php");
        double budget = scanner.nextDouble();

        // ask for each expense
        System.out.print("Enter Food expense: Php");
        double food = scanner.nextDouble();

        System.out.print("Enter Transportation expense: Php");
        double transportation = scanner.nextDouble();

        System.out.print("Enter Other expense: Php");
        double other = scanner.nextDouble();

        // extra expense category
        System.out.print("Enter Savings: Php");
        double savings = scanner.nextDouble();

        // call the compute method
        double total = computeTotal(food, transportation, other, savings);

        // call the display method
        showResult(name, food, transportation, other, savings, total, budget);

        scanner.close();

    }

}
```

Sample Execution:

- If the expense is less than or equal to the user's budget.

```
<terminated> ExpenseTrackerCortezo [Java Application] C:\Users\Marky\.p2\pool\plugins\org.eclipse.justj.openjdk.hotspot.jre.full.win32.x86_64_21.0.10.
   Personal Expense Tracker

Enter your name: Linda Walker
Enter your budget: Php500
Enter Food expense: Php200
Enter Transportation expense: Php140
Enter Other expense: Php50
Enter Savings: Php50

--- Expense Summary for Linda Walker ---
Food:              Php200.0
Transportation:    Php140.0
Other:             Php50.0
Savings:           Php50.0
Total Expenses:    Php440.00
Budget:            Php500.00
Remaining Budget:  Php60.00
Budget Status:     Within Budget!

Wow! It seems that you can manage your expenses really well! Keep it up, Linda Walker!

Thank you for using the Personal Expense Tracker, Linda Walker!
```

- If the expense is more than the budget of the user.

```
