BSIT 2-1 MIDTERM SEATWORK #3 - Basic ATM System

Source code:

```
import java.util.scanner;

public class ATMTransactionCounterCortezo {
    public static void main (String [] args) {

        Scanner scanner = new Scanner (System.in);

        int choice;
        double curr_bal = 8000;
        double amt;
        int count = 1;
        boolean is_running = true;

        while (is_running) {
            System.out.println ("===== ATM MENU =====");
            System.out.println ("1. Check Balance");
            System.out.println ("2. Deposit");
            System.out.println ("3. Withdraw");
            System.out.println ("4. Exit");
            System.out.println ("Enter your choice: ");
            choice = scanner.nextInt();

            switch (choice) {
                case 1 :
                    System.out.println ("Balance : P" + curr_bal);
                    count++;
                    break;
```

```
case 2:
    System.out.print("Depost : ");
    amt = scanner.nextDouble();
    curr_bal = curr_bal + amt;
    System.out.println("New Balance is P" + curr_bal);
    count++;
    break;

case 3:
    system.out.print("withdraw : ");
    amt = scanner.nextDouble();

    if (amt > 2000) {
        System.out.println("Sorry! The maximum withdraw is 2000")
    }
    else if (amt > curr_bal) {
        System.out.println("Insufficient balance");
    }
    else {
        curr_bal = curr_bal - amt;
        System.out.println("New balance is P" + curr_bal);
    }
    count++
    break;
```

No. _____
Date _____

```
Case 4 :
        System.out.println("Total Transactions : "} + count);
        is_running = false;
        break;

    default:
        system.out.println("Invalid choice, please try again!");
    }
  }
}
}
```

Sample Execution (at least 3 scenarios)

```
===== ATM MENU =====
1. Check balance
2. Deposit
3. Withdraw
4. Exit
Choice : 1
Balance : P8000.0

===== ATM MENU =====
1. Check Balance
2. Deposit
3. Withdraw
4. Exit
Choice : 2
Deposit : 2000
New Balance is P10000.0
```

===== ATM MENU =====

1. Check Balance

2. Deposit

3. Withdraw

4. Exit

Choice : 3

Withdraw : 3000

Sorry! The maximum withdaw is 2000

===== ATM MENU =====

1. Check Balance

2. Deposit

3. Withdraw

4. Exit

Choice : 3

Withdraw : 500

New Balance is P9500.0

===== ATM MENU =====

1. Check Balance

2. Deposit

3. Withdraw

4. Exit

Choice : 5

Invalid choice, please try again!

No. _____
Date _____

===== ATM MENU =====

1. Check Balance
2. Deposit
3. Withdraw
4. Exit

Choice : 4

Total Transaction : 5

Short Explanation (3-5 sentences)

For my program, I created a basic ATM system following all the given requirement needed for this activity. The whole program beeps on running as long as the is_running boolean variable is True using a while loop, allowing the user to perform multiple transactions until they chose the exit option. Next is for choosing different actions depending on the user's input in which I used the switch-case that controls the menu and executes base on the user's choice. Inside the case 3 swith, we can see the if-else statements to ensure that the withdraw amount does not exceed 2000 pesos and is not greater than the current balance. Also, if the conditions are not met, this program will display an error message, telling the user to try again.
